A44399
Stromelysin 3 (EC 3.4.24.-) - mouse
N;Alternate names: matrix metalloproteinase 11 (MMP11)
C;Species: Mus musculus (house mouse)
C;Date: 10-Jun-1993 #sequence_revision 18-Nov-1994 #text_change 10-Jul-1998
C;Accession: A44399
C;Accession: A44399
J;Cell Biol. 119, 997-1002, 1992
A;Title: The breast cancer-associated stromelysin-3 gene is expressed during 1, Reference number: A44399; MUID:93054930; PMID:1429845
A;Accession: A44399
A;Status: preliminary; not compared with conceptual translation

C/Comment: This protein is a member of the matrix metalloproteinase family.
C/Superfamily: interstitial collagenase; hemopexin repeat homology; matrix metalloproteinase; cinc; zymogen
C/Keywords: hydrolase; metalloproteinase; zinc; zymogen
F/52-261/Domain: matrix metalloproteinase homology <MMP>
F/291-483/Domain: hemopexin repeat homology <FMNP>
F/291-483/Domain: hemopexin repeat homology <FMNP>
F/294,218,222,228/Binding site: zinc, catalytic (Cys, His, His, His) (inhibited) #status
F/218,222,228/Binding site: zinc, catalytic (His) (active) #status predicted
F/219/Active site: Glu #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Contents: 8kin wounds

New matrix metalloproteinases (MMP) genes and polypeptides, useful treating diseases or for screening modulators of MMP to treat such diseases, e.g. mental disorders, Parkinson's disease, cancers or inflammatory conditions. for

Claim 31; Page 60; 94pp; English.

The invention relates to genes encoding matrix metalloproteinases (MMP). The MMP genes are useful for producing MMP polypeptides and for screening modulators of MMP. The MMPB are useful for breaking down extracellular matrix (ECM), which is essential for processes including embryonic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                development, morphogenesis, reproduction, or tissue repair and remodelling. The MMPs are particularly useful for identifying compounds that modulate the activity of genes to treat pathologies, e.g. mental disorders, Alzheimer's disease, multiple sclerosis, Parkinson's disease or motorneuron disease. The MMP polypeptides and genes, as well as their modulators, are useful for treating metabolic diseases and disorders (e.g. type 2 diabetes, obesity, cardiovascular, dyslipidaemias,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammatory conditions (e. diseases or wound healing metalloproteinase MMPU10

CC AAF81714 to AAF81740 encode the human proteases and protease inhibitors (C (PPIMS) given in AAB74668 to AAB74694. The PPIMS can have activities such as: anti-human immunodeficiency virus (HIV); antidiabetic; antitityroid; c immunostimulant; immunomodulator; antiinflammatory; immunosuppressive; c fungicide; protozoacide; antiarteriosoclerotic; antiartherosclerotic; c fungicide; protozoacide; antiarteriosoclerotic; antiartherosclerotide; c virucide; antipporiartic; and hepatotropic. PPIM polynucleotide and c protein sequences can be used in the diagnosis, treatment and prevention of autoimmune/inflammatory disorders such as AIDS, DiGeorge's syndrome, c severe combined immunodeficiency disease (SCID), Chediak-Higashi (C syndrome, Cushing's disease, Addison's disease, autoimmune thyroiditis, C syndrome, viral, bacterial, fungal, parasitic, protozoal, and helminthic c infections and cell proliferative disorder such as arteriosclerosis, cirrhosis, hepatitis, psoriasis and cancer. PPIM c polynucleotide sequences can be used in somatic or germline gene therapy c and in diagnosis of diseases. They can also be used in generating genomic sequences and in molecular biology techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Yue H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New protease (inhibitors) useful for diagnosis and autoimmune/inflammatory disorders such as acquired syndrome, Cushing's disease, Addison's disease and disorders such as cancer.

This represents a human MPROT45 polypeptide. The polypeptide can be expressed by standard recombinant methodology. The MPROT45 polypeptide, antibodies and their agonists or antagonists are useful in the treatment of diseases relating to MPROT45 polypeptide including arthritis, respiratory diseases, thrombosis, diabetes, cancer, inflammatory disorders, osteoporosis, cardiovascular disorders, hypertension, stroke, asthma, neurodegenerative diseases such as Alzheimer's, Parkinson's, depression and other CNS disorders or as a vaccine. They are also useful for diagnosis or determining susceptibility
                                                                                                                                                                                                                                                                                                            An isolated polypeptide treatment of diseases relating polypeptide including arthritis, respiratory diseases, diabetes, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-JAN-2000; 2000GB-00001898
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MPROT45; antiarthritic; thrombolytic; antidiabetic; cytostatic; human; antiinflammatory; osteopathic; cardiant; hypotensive; cerebroprotective; antiasthmatic; nootropic; neuroprotective; vaccine.
